## Whitepaper

ParsBit Iranian Digital Currency with the symbol PARS  with a Total supply of 21,000,000, which is also the number of kings of Bitcoin digital currencies and can be installed and transferred in a variety of reputable and international digital currency wallets. And it can be exchanged in the best international digital currency exchanges, it can be transferred with high security on the bed of powerful and invaluable ethereum blockchain chains. ParsBit for transferring and transferring millions of dollars of Iranian capital around the world in just a few seconds and without the

need for sanctioned bank intermediaries with very low fees below one dollar, just a few cents and installing digital currency wallets mentioned on mobile Both sides of the deal. From the very beginning of human life and the use of tools or commodities, human trading systems have evolved from one to the other, with the advancement of technology from its original form, which was very large in size, to its smaller and facilitated dimensions. To make the use of these trading systems easy, until the beginning of the twentieth century and the beginning of the revolution, the communications of the transfer of assets by the electronic and Internet systems entered a new and emerging era, but still with many security problems and different banking rules. Different countries were faced with the need for a third centralized system to transfer assets between traders, which, with its sophisticated rules and regulations, faced the transfer of large amounts of assets with various and cumbersome problems that risked being blocked. The property of individuals was also subject to international sanctions. . With the end of the twentieth century and the beginning of the twenty-first century

and its first decade, with the invention of the new transmission system, the emergence of blockchain capital values and asset transfer entered a new and much more advanced era. And digital currency was created on its own transfer platform, the very powerful blockchain platform that can move millions of dollars of capital in a matter of seconds with a fee of less than a dollar without intrusive bank intermediaries between the two parties using digital currencies. Slow down. And now ParsBit with the symbol or abbreviation of Pars Arzdigital is the people of Pars Land and Iranian users of this digital currency can easily invest their capital with high security on the blockchain platform by installing valid international ArzDigital wallets on mobile or system Transfer, or save your computer. ParsBit's intrinsic value has increased day by day due to its growing supply and demand, and due to the small number of this currency, which is 21 million, the buyers of this Iranian digital currency at any time when buying this currency, even with maintenance and preservation. They can make a profit in the future by raising its price and maintaining the inflationary value of their assets and capital. . ParsBit is produced

on the basis of ethereum blockchain platform, the most secret and secure blockchain chain in the world, which cannot be hacked or infiltrated in any way, and if we consider blockchain ethereum as a network system of computers, ParsBit is like the software on These systems have been implemented and recorded their transactional and transfer information on the blocks of this impenetrable chain and protect your assets and capital with very high security, which the ParsBit digital currency development team concluded. Instead of building a new blockchain and starting from scratch, what has been done before is unacceptable because it is not acceptable to accept and install new blockchains for reputable international exchanges and wallets, and it is difficult to change your data for the new blockchain. they give . And even with the creation of new blockchains, there is a 51% chance of users being attacked due to small probability of attack and loss of capital, so the best idea was to use a valid, powerful and non-hackable ethereum blockchain, all of which has several blockchain infrastructures and databases. It has been used and accepted in all international exchanges

and wallets for years, and many reputable international digital exchanges use the same powerful and fast ethereum blockchain to build their digital currency , and so on. They are not going to build a new blockchain. .

The applications of Pars Bit digital currency are very diverse and can be used in a variety of centralized and decentralized and internationally reputable exchanges for buying and selling trading with various types of currency pairs, including usdt digital dollars. What is ParsBit supposed to do in the future? Imagine all the different deals that happen in everyday life, buying or selling a car, renting an apartment, buying a ticket to the World Cup final, they all involve trusting your money and information, which Pars Bit solves. Slow means that there is a lot of potential for the future. Door locks, refrigerators, stoves, lamps, boilers, and televisions are all connected to the Internet, and they all need to run, which is called the Internet of Things, which with We enjoy technology safely and with clear and digital instructions. Now imagine a world that has blockchain technology and automatically guides those transactions and technologies, while an unbroken record of all of this is forever recorded on the Internet.

At the beginning of this Whitepaper, we asked, What is Pars Bit? Well, the real answer is, ParsBit is anything you want technology to be in the future.

So, get started, learn how to work with ParsBit and think big. The future begins now!

ParsBit is as valuable as other currencies and can be used for buying and selling, exchanges and all financial processes. The difference between ParsBit and traditional currencies is that it is decentralized. ParsBit

operates on a decentralized database called blockchain ethereum and will quickly become popular and grow strongly towards the peaks of economic value. ParsBit can perform transactions very quickly and easily without the need for intermediary companies. And it is hoped that in the future, many large online stores will be able to buy with Pars Bit.Pars Bit will also create many businesses. The future lies in blockchain technology and digital currency, and the digital currency market is projected to reach thousands of billions of dollars in the next few years. ParsBit digital currency will also find a high place for itself. And the demand for buying and investing in it will grow significantly. Easy to maintain and maintain the value of your capital by ParsBit is very easy, convenient, portable and very high security compared to the maintenance of capital goods such as gold and paper money. ParsBit like a brilliant and valuable diamond, has been advancing for tens of thousands of years in the land of Pars and the cradle of the world's industrial revolutions, in order to link the ancient and proud civilization of Pars to human civilization and future technology. And Navid promises its applicants and users to keep their capital in the

economic and destructive crises, and the reason for that is the low number of digital currency ParsBit, which is also the number of kings of Bitcoin digital currencies, which over time And the increase in demand and the low number of policies have led to a sharp rise in its price, which has kept and increased the capital of its users. . And the development of ParsBit digital currency includes three phases, in each phase a certain number of this currency is released. Phase one is the initial supply or sale of this currency, which is introduced in the first year of 2020, which is free. Making a certain number of Total 21 million total of this currency is launched on several well-known decentralized international exchange exchanges that investors can easily buy without registering and with just a few clicks through these reputable decentralized exchanges. Save this currency on your wallets. And the second phase of ParsBit, after selling its total initial supply and attracting sufficient capital, enters the second phase and launches on centralized and well-known international exchanges, and in this phase, a percentage of ParsBit currency is released for further development. And in the third

and final phase, it has led to the development of ParsBit international transfers, and on a large number of digital and modern devices, or the Internet of Things, it can be bought, sold and used, and its credit for use in the most reputable online stores. International marketing will be upgraded and on the 2030 horizon, ParsBit will be one of the most reputable currencies and international rankings .
